

Oops I got 10 billion users:

Top 10 steps to a valuable consumer account system

Robin Goldstein

Director of Product
Authentication Experience
Microsoft

What happens at Identiverse...

The opposite of value

Growth is good, right?

Then what's wrong with this picture?

Top 10 to value

One Account per User

A tale of (at least) 7 accounts...

Ronni**@aol.com

Ronni**@aol.com
(on Microsoft)

Ronni*****@yahoo.com

Ronni**@aol.com
(on iCloud)

Ronni***@iCloud.com

Ronni****@iCloud.com

RG12***@iCloud.com

And more...

Things you can do:

Use **single sign on** techniques to prevent unnecessary friction

Encourage users to **add backup info** early in the journey

Verify that info and help them keep it up to date

If you support passwords, consider supporting modern alternatives (more on this later)

Ways to prove who you are

Manage sign-in and verification options for your Microsoft account. [Learn more about sign-in and verification.](#)

+ Add a new way to sign in or verify

annav@outlook.com

We've got your back

Recovery info ensures you can always get back into your account.

Phone number

Add

Brand + value proposition

Can I trust you?

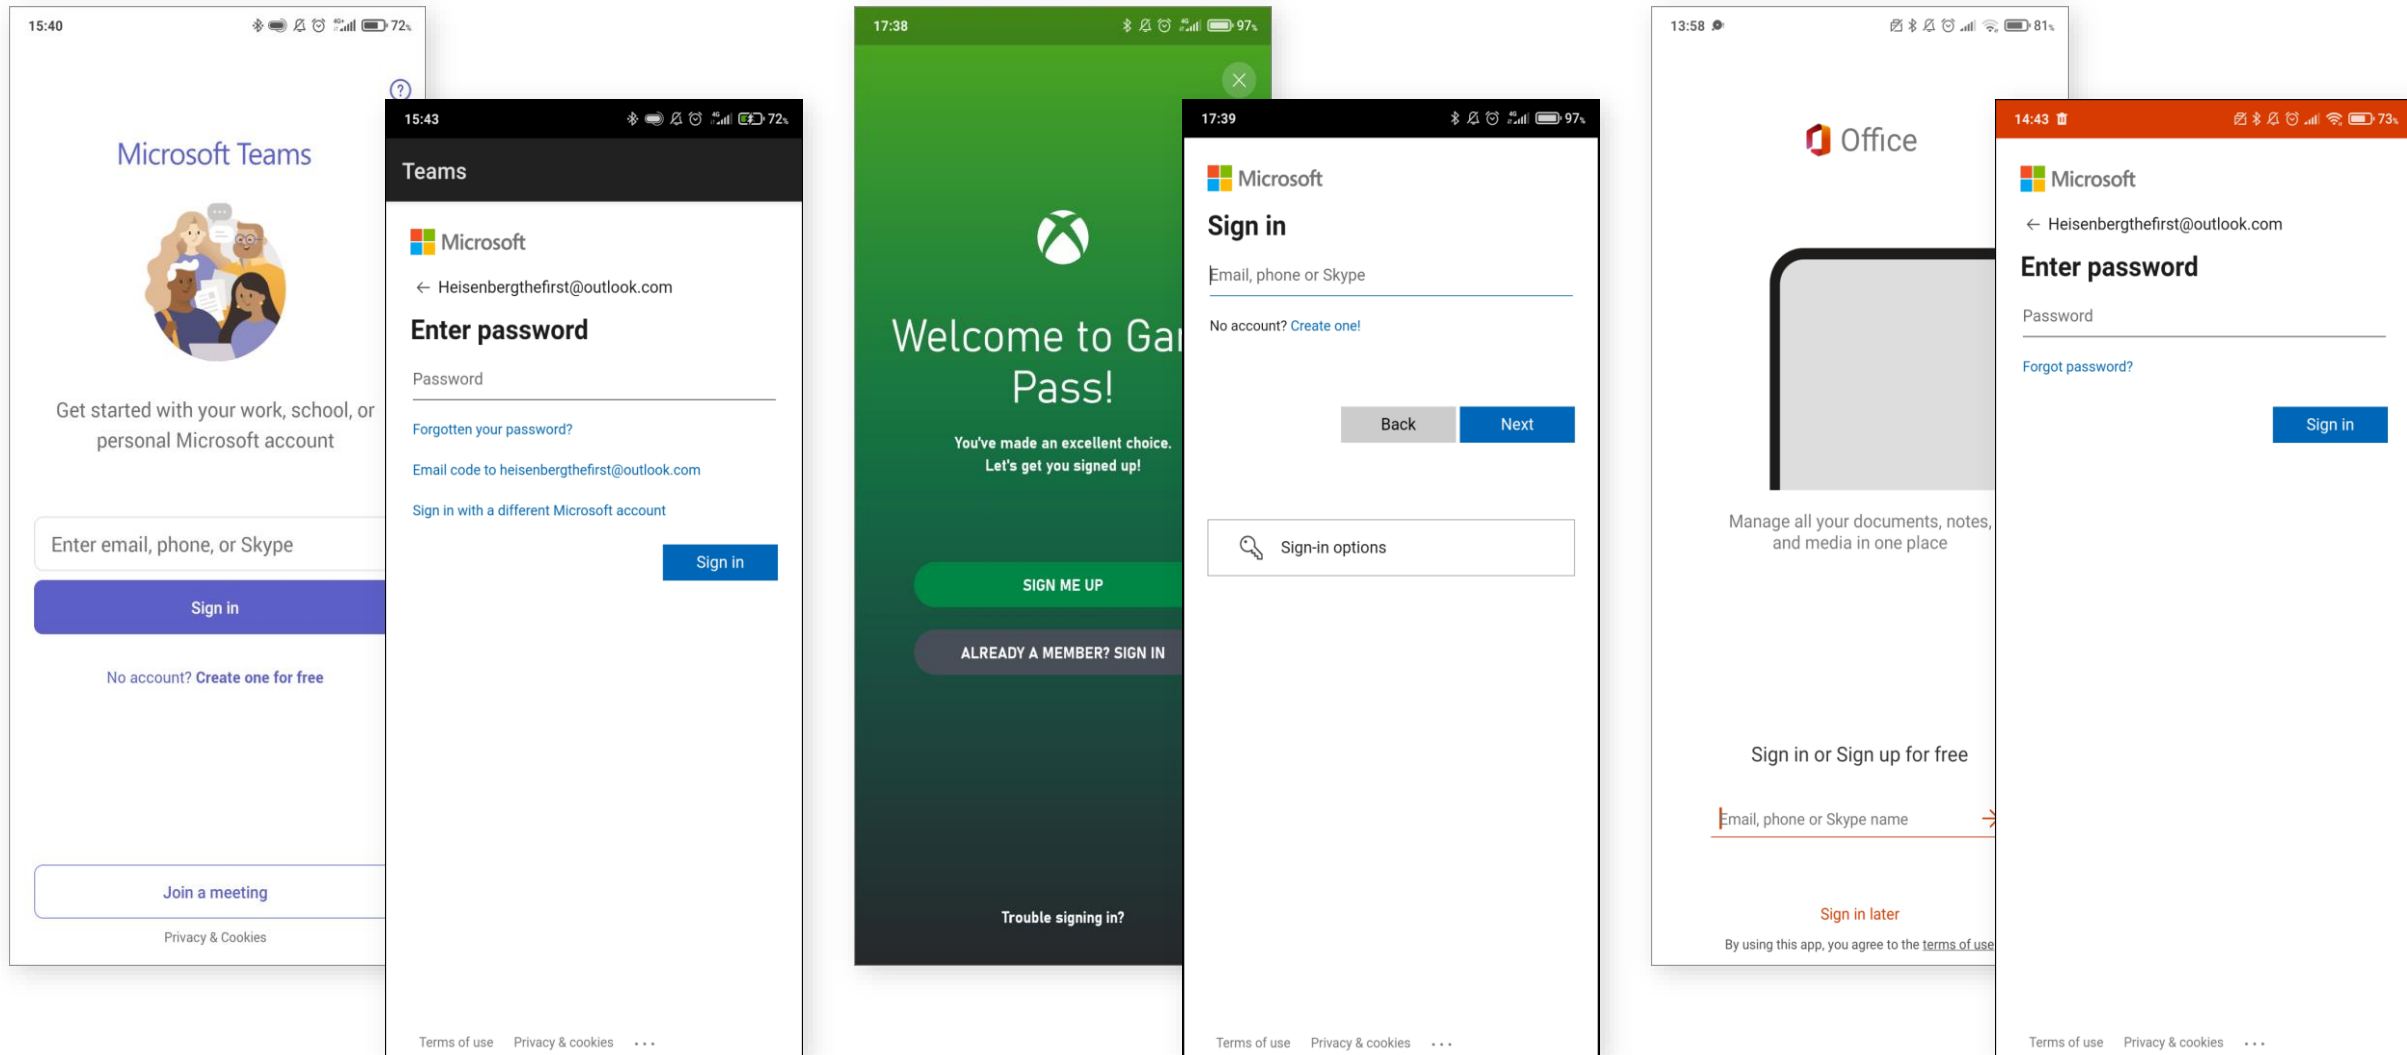

“Shouldn’t you know me by now?”

“Do I need this? I’d rather not go through the hassle and be inundated with sales pitches”

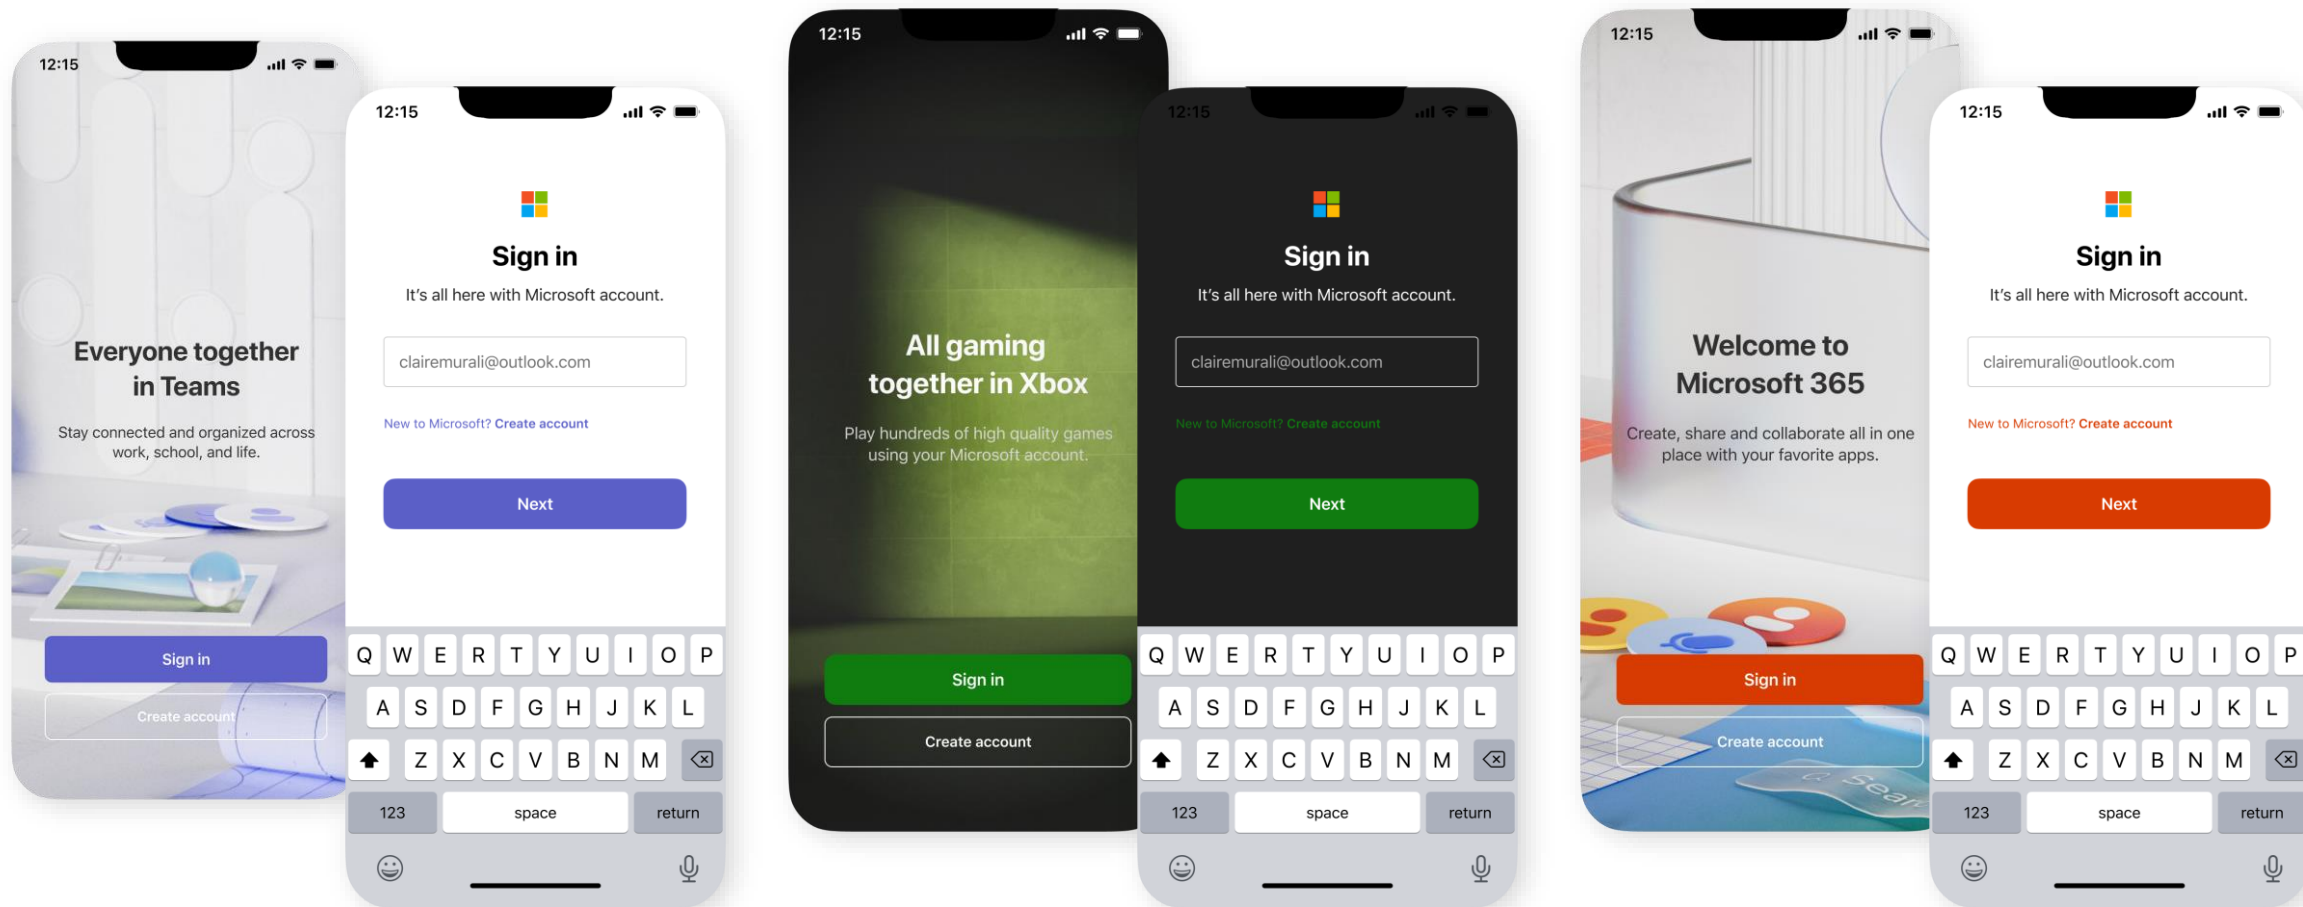

“I do use Office [but] I don’t believe I have a Microsoft account”

“What will happen if I do this?”

So instead of this...

This...

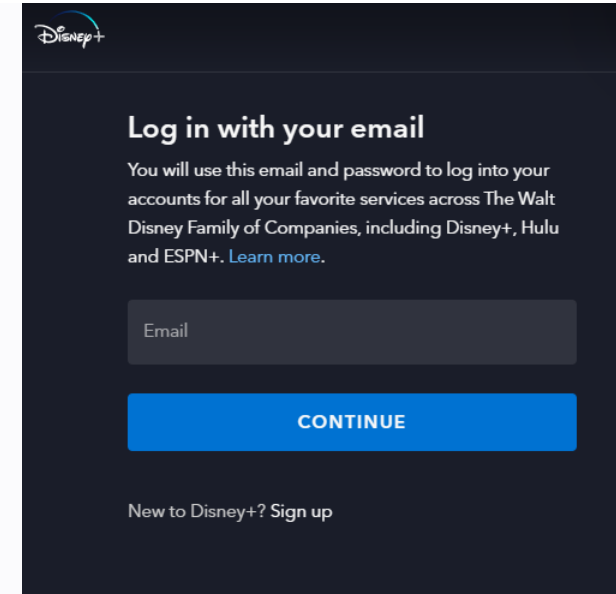

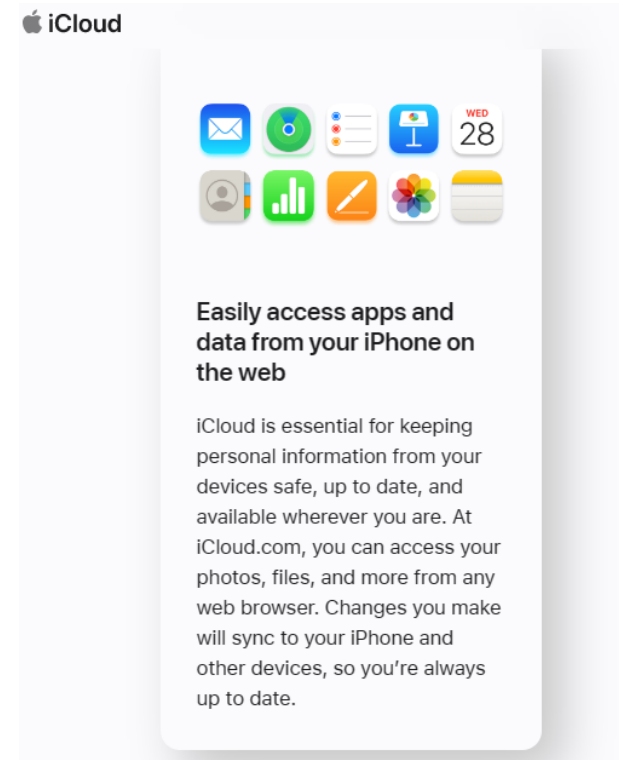

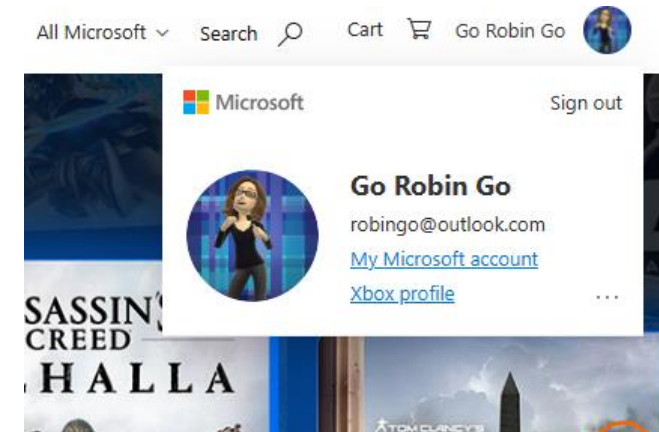

Things you can do:

Let users know **what they can do** with the account

Highlight **things they care about** like keeping their data and files safe and available

Use **common UX controls** and make **your brand and visual language** part of any interactive sign in UX

As much as possible, **one account per user** – even when you have multiple brands

Measure What Matters

(for illustrative purposes only)

WHAT? Objective: Maximize subscription revenue

HOW? Key Results:

- Increase sign up rate from 45% to 80%
- 50% of users sign in to 2 or more services each month
- Users stay signed in on the same device 90% of the time

Good data is the foundation for measuring impact

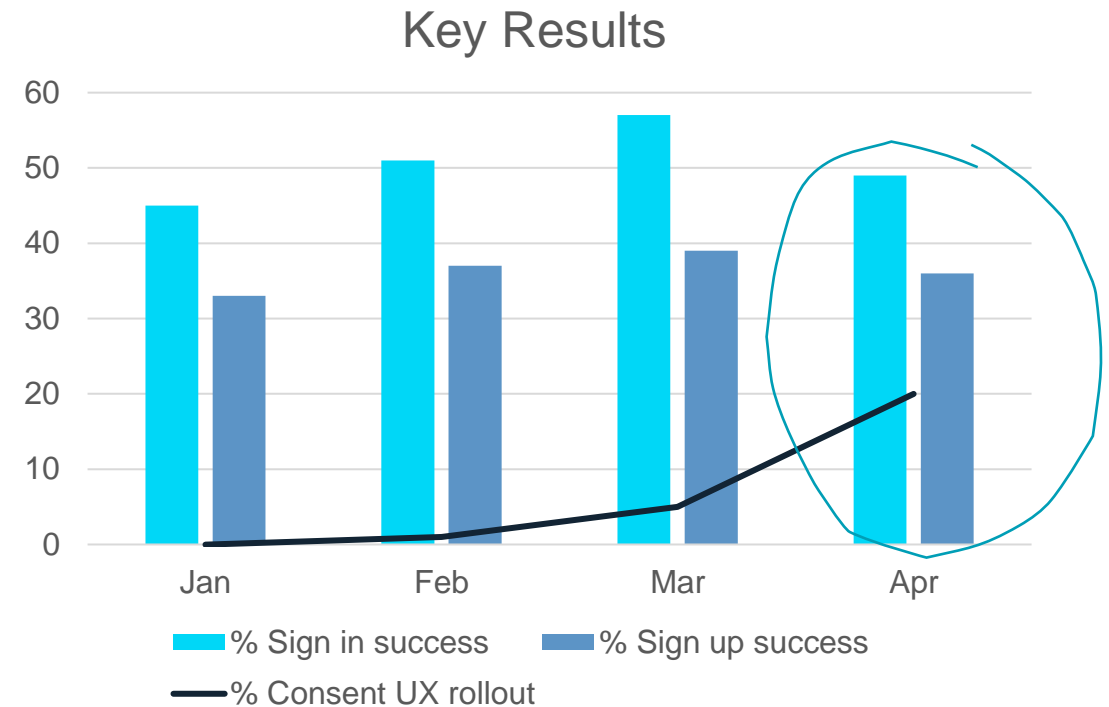

Inconclusive:

Active 900bn New 49M Count 1T SignIn 10% SignUp 15%

2000% WoW*

Better:

4

Must work great on mobile

7.2 billion mobile users

Mobile flows getting more common

Welcome back!

We're so excited to see you again!

More devices, more value

Make it work everywhere

2 or more apps

2 or more devices

4x or more lifetime value per
customer

Passwords are bad

Avoid password headaches

- Offer MFA
- Provide passwordless options
- New techniques like passkey more user friendly and phis-resistant
- Build WebAuthN directly in your apps

SMS is bad too

Don't be hung out to dry

- Implement protections such as reputation services to get a handle on IRSF Fraud
- Reduce “good” SMS usage by enrolling users in remote approval (WebAuthn)

Regulation and Privacy

Not just a good idea, it's the law(s)

- Do Not Track → for browsing
- COPPA → children's privacy
- GDPR → robust EU privacy
- CCPA (California) → state privacy
 - Colorado, Connecticut, Iowa, Virginia, Utah coming soon
- China PIPL → personal info protection
- DMA → new EU regulations around data sharing and sign in

...and more

Everything, everywhere, all at once

Minutes of downtime x Average revenue per minute = **downtime losses**

“Zero Trust” for Consumers

Fraud is everywhere, and adapting

Bad bots

Cryptocurrency Fraud

Account Takeover

Phishing
Credential Stuffing

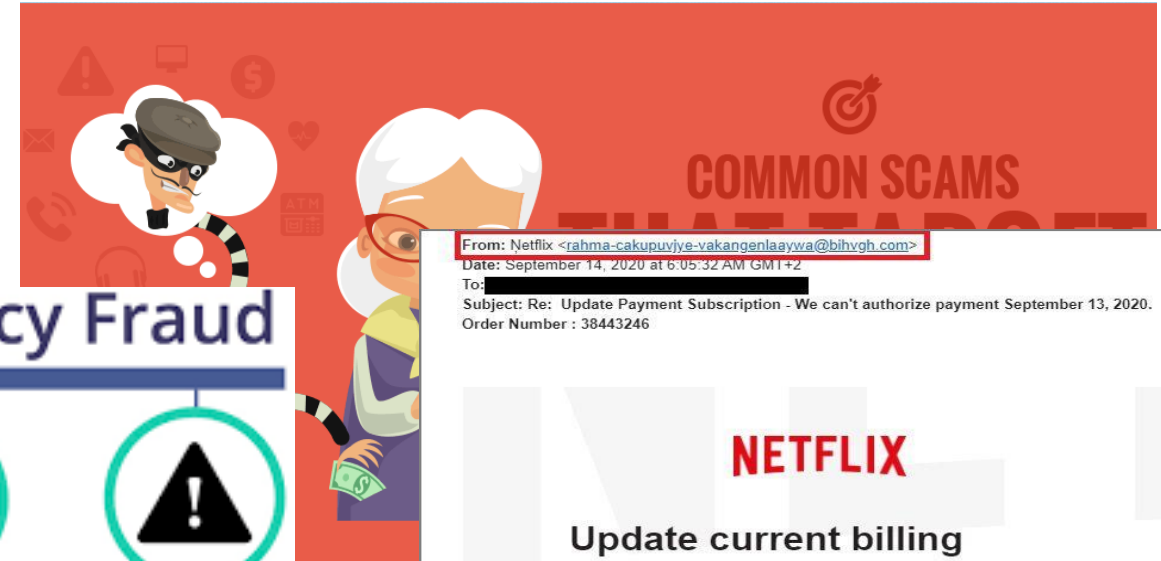

Mining Fraud

Botnets
Crypto Jacking

Initial Coin
Offering Fraud

Exit Scams
Pump and Dump

NETFLIX

Update current billing
information

Fraud: How to Detect
and Prevent Scams**

**70+ Scams to watch
out for online**

comparitech

Things you should do

- Map user journeys according to user risk and **categorize high risk operations**
- **Apply controls like identity proofing or multifactor** authentication before creating an account or viewing payment info
- **Use real-time risk analysis** on user signups and challenge high risk users appropriately with tools like CAPTCHA
- Have good monitoring and **adapt based on suspicious patterns**
- **Replace attackable password and SMS based authentication** methods with unphishable credentials over time

THANK YOU!
