

Realizing Human-Centric Digital Identity for Government

**Elizabeth
Garber**

IDPartner

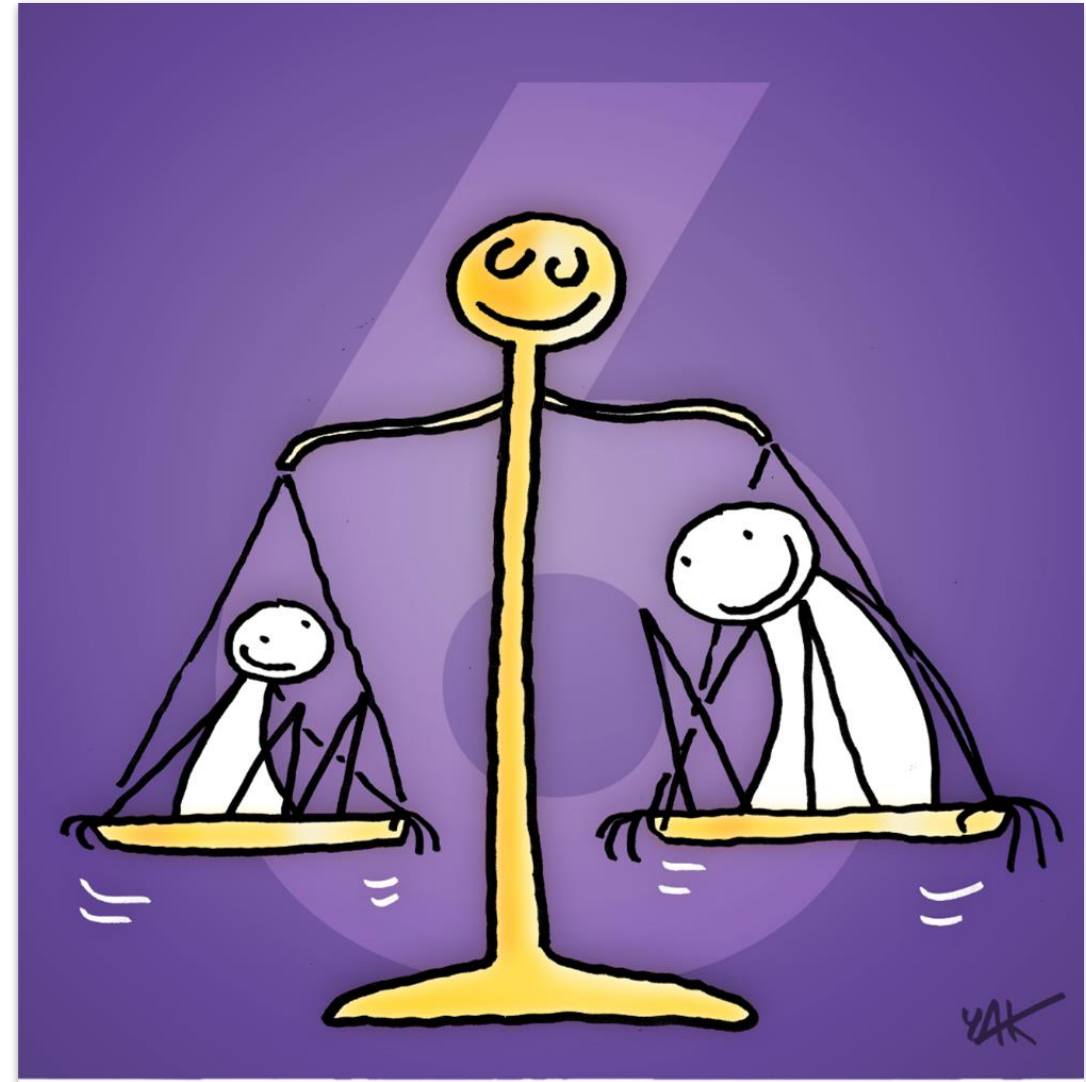

**Mark
Haine**

**OpenID
Foundation**

Everyone has the right to recognition everywhere as a person before the law.

Universal Declaration of Human Rights - Article 6

Right to Social Insurance

Right to Safety

Right to Privacy

Right to Self Determination

Right to Healthcare

**Right to Start a
Family**

Right to Education

Right to Leave

Right to Return

This drives a UN Sustainable Development Goal

SDG Goal 16.9: By 2030, provide legal identity for all, including birth registration indicator 16.9.1 Proportion of children under 5 years of age whose births have been registered with a civil authority, by age.

**Identity Systems should be
designed to sustain & promote
human rights.**

>42M Americans were victims of
identity fraud in 2021

Javelin Research

The infographic features a central light blue circle containing the main text. Four swooshes, two in dark blue and two in light blue, radiate from the circle to point towards the category labels. The background is white with decorative dashed light blue lines in the corners.

Illicit flows represent 1-3% of GDP

people.**

The Invisibles: The cruel Catch-22 of being poor with no ID

By Patrick Marion Bradley

June 15, 2017 at 8:00 a.m. EDT

**They offer
governments a
myriad of societal
benefits.**

Safety & Security

- Physical Security
- Cyber Security
- Political Stability

Access to Government Resources

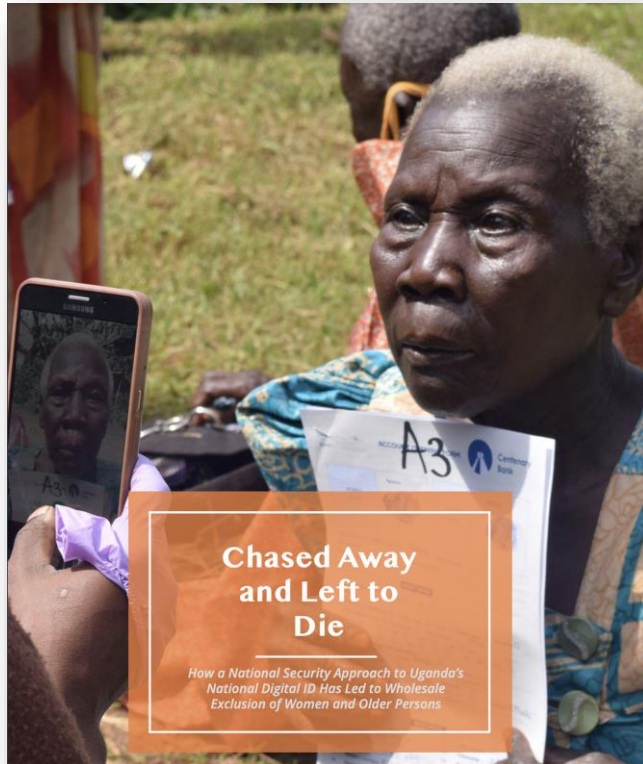

- Government Services
- Benefits and Aid
- Taxation

Economic Stability, Access, and Growth

- Financial Stability
- Economic Enablement
- Equitable Access
- X-Sector Convenience

There are risks: Uganda

“Without an ID or clinic card for women who have been receiving antenatal care, [you will receive] no treatment.

Many people fall sick and stay home and die.”

23-33% lacked the NIC in 2021

There are risks: Myanmar

A demonstration over identity cards at a Rohingya refugee camp in Bangladesh in April, 2018. Image: NurPhoto/SIPA USA/PA Images.

Source: [Open Democracy](#), October 2018

Before his family fled Myanmar last year, Nurul Hoque dug up his grandfather's old ID, taking it with him to Bangladesh along with old photos and his own identification cards. He hopes they will one day help prove where he is from.

There are risks: United States

MOTHERBOARD
TECH BY VICE

Homeland Security Uses AI Tool to Analyze Social Media of U.S. Citizens and Refugees

Customs and Border Protection (CBP) is using a tool called Babel X that can link a person's Social Security number to their social media posts and location data, according to an internal CBP document obtained by Motherboard.

Clearview AI used nearly 1m times by US police, it tells the BBC

By **James Clayton & Ben Derico**
BBC News, San Francisco

Facial recognition firm Clearview has run nearly a million searches for US police, its founder has told the BBC.

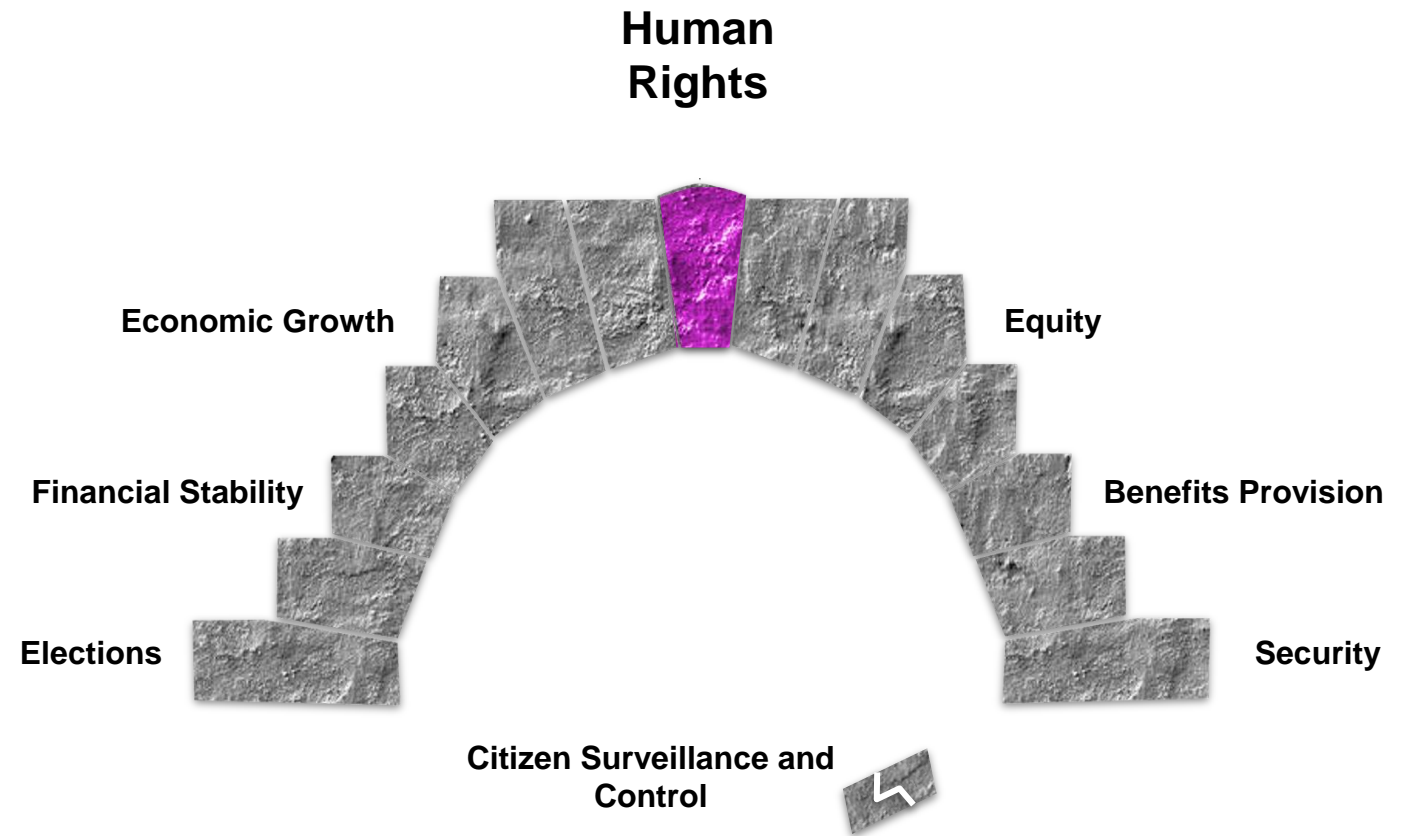

CEO Hoan Ton-That also revealed Clearview now has 30bn images scraped from platforms such as Facebook, taken without users' permissions.

*Technology is neither good
nor bad; nor is it neutral.*

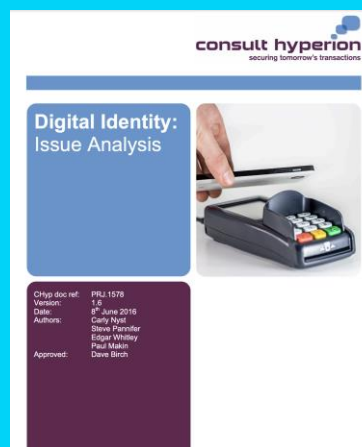

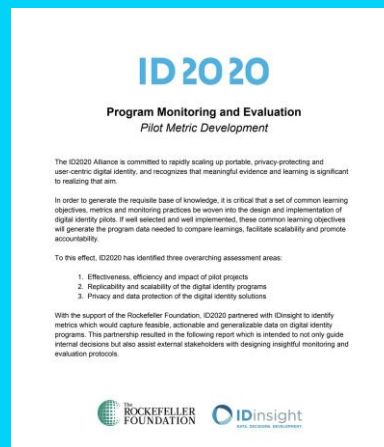

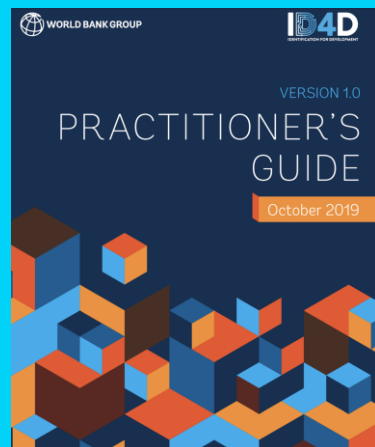

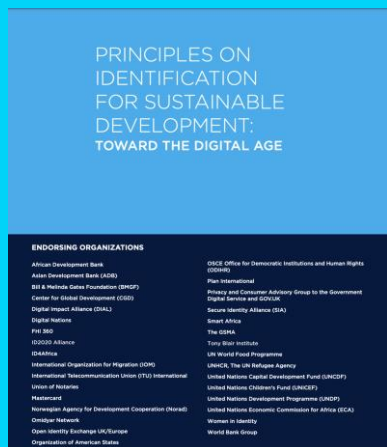

Melvin Kranzberg, 1917-1995

**Human Rights
should be the
keystone design
factor.**

Our recommendations align to & build on a wide range of literature

Digital Identity Systems should be designed to sustain & promote human rights.

1

Human
Centered
Design
Processes

Human Centric Design

- Designed for all humans
- Enables service providers
- Allows choice and control

Inclusive

- All Communities
- Voluntary
- Portable
- Available

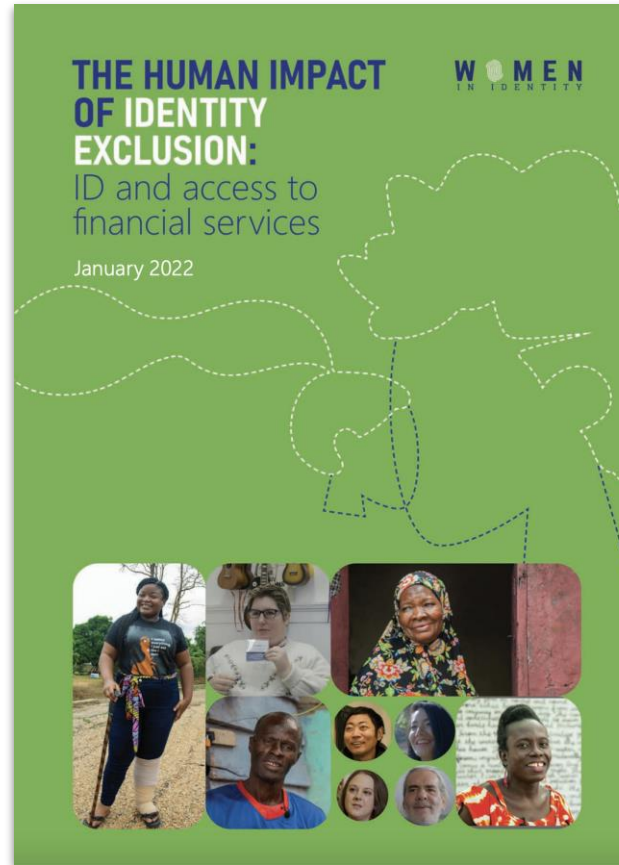

Humans - users and organizations - should be central to the design process.

Some Human-Centered Resources

- Use of Personas
- Broad Citizen Engagement

Source: [DIACC and HTF](#), 2022

Source: [Women in Identity](#), 2022

- Engaging vulnerable and hard-to-reach communities
- Moving towards a Code of Conduct

“ ‘Edge Cases’ are central to our humanity”

- Henk Marsman

No Birth Record

Witness Protection

Effectively Stateless

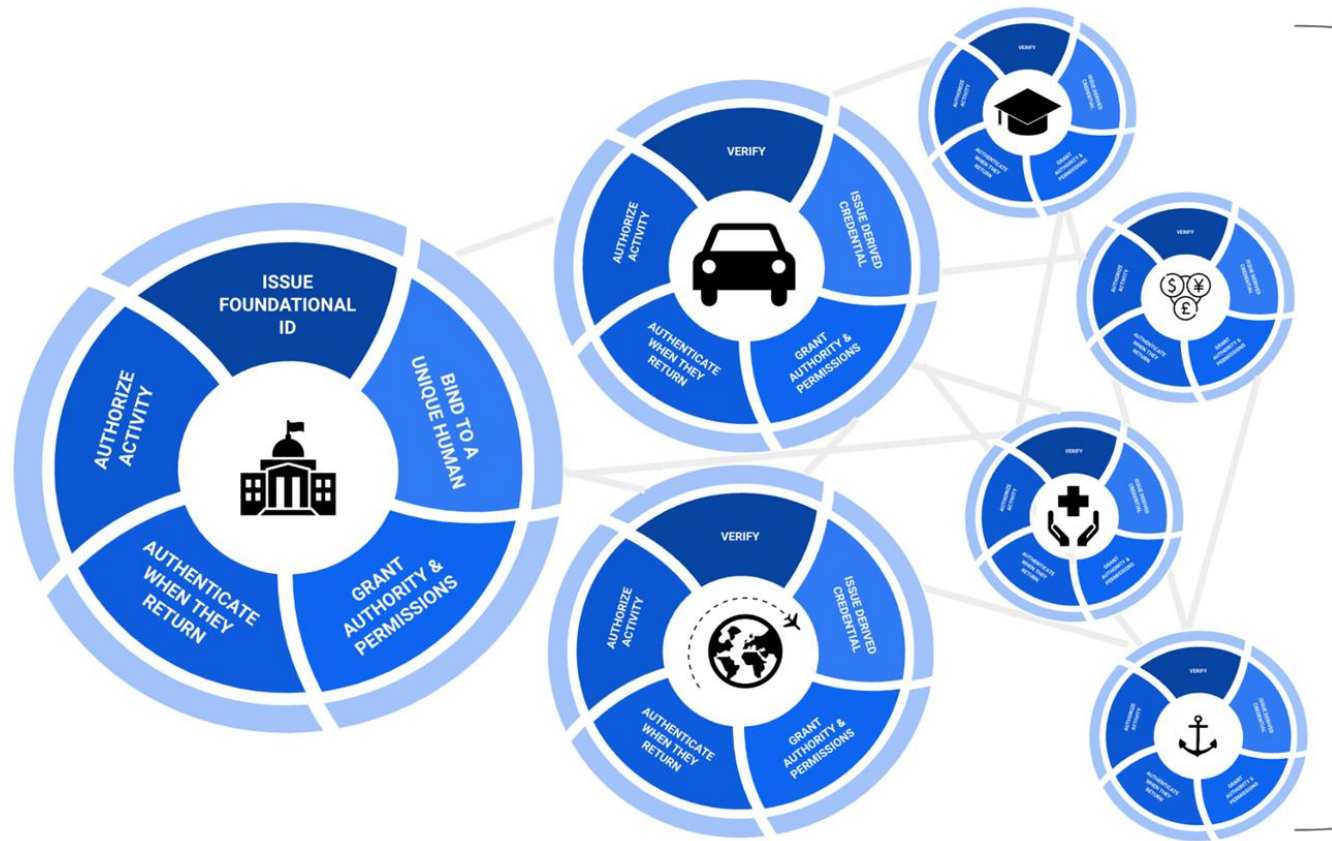

Domestic Abuse

Elder Care

But... governments & ecosystems are complex

How can we regulate this and keep people safe?

How can this support a thriving private sector?

Digital Identity Systems should be designed to sustain & promote human rights.

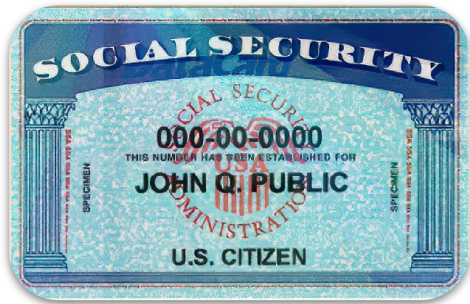

1

Human
Centered
Design
Processes

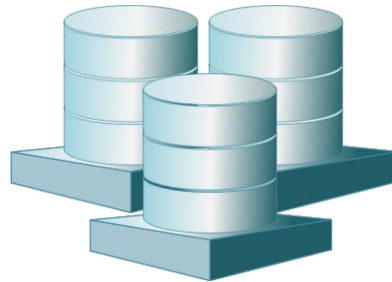

2

Strategic
Design &
Governance

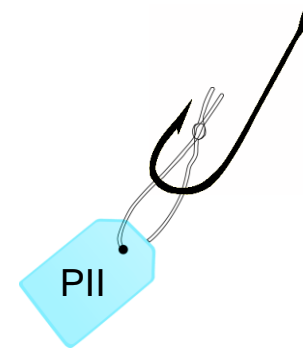

Strategic design over point solutions

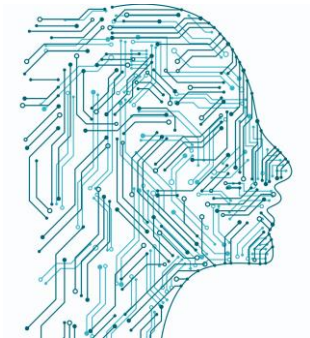

**Function
Creep**

**Data
Proliferation**

**Inappropriate
Market Tools**

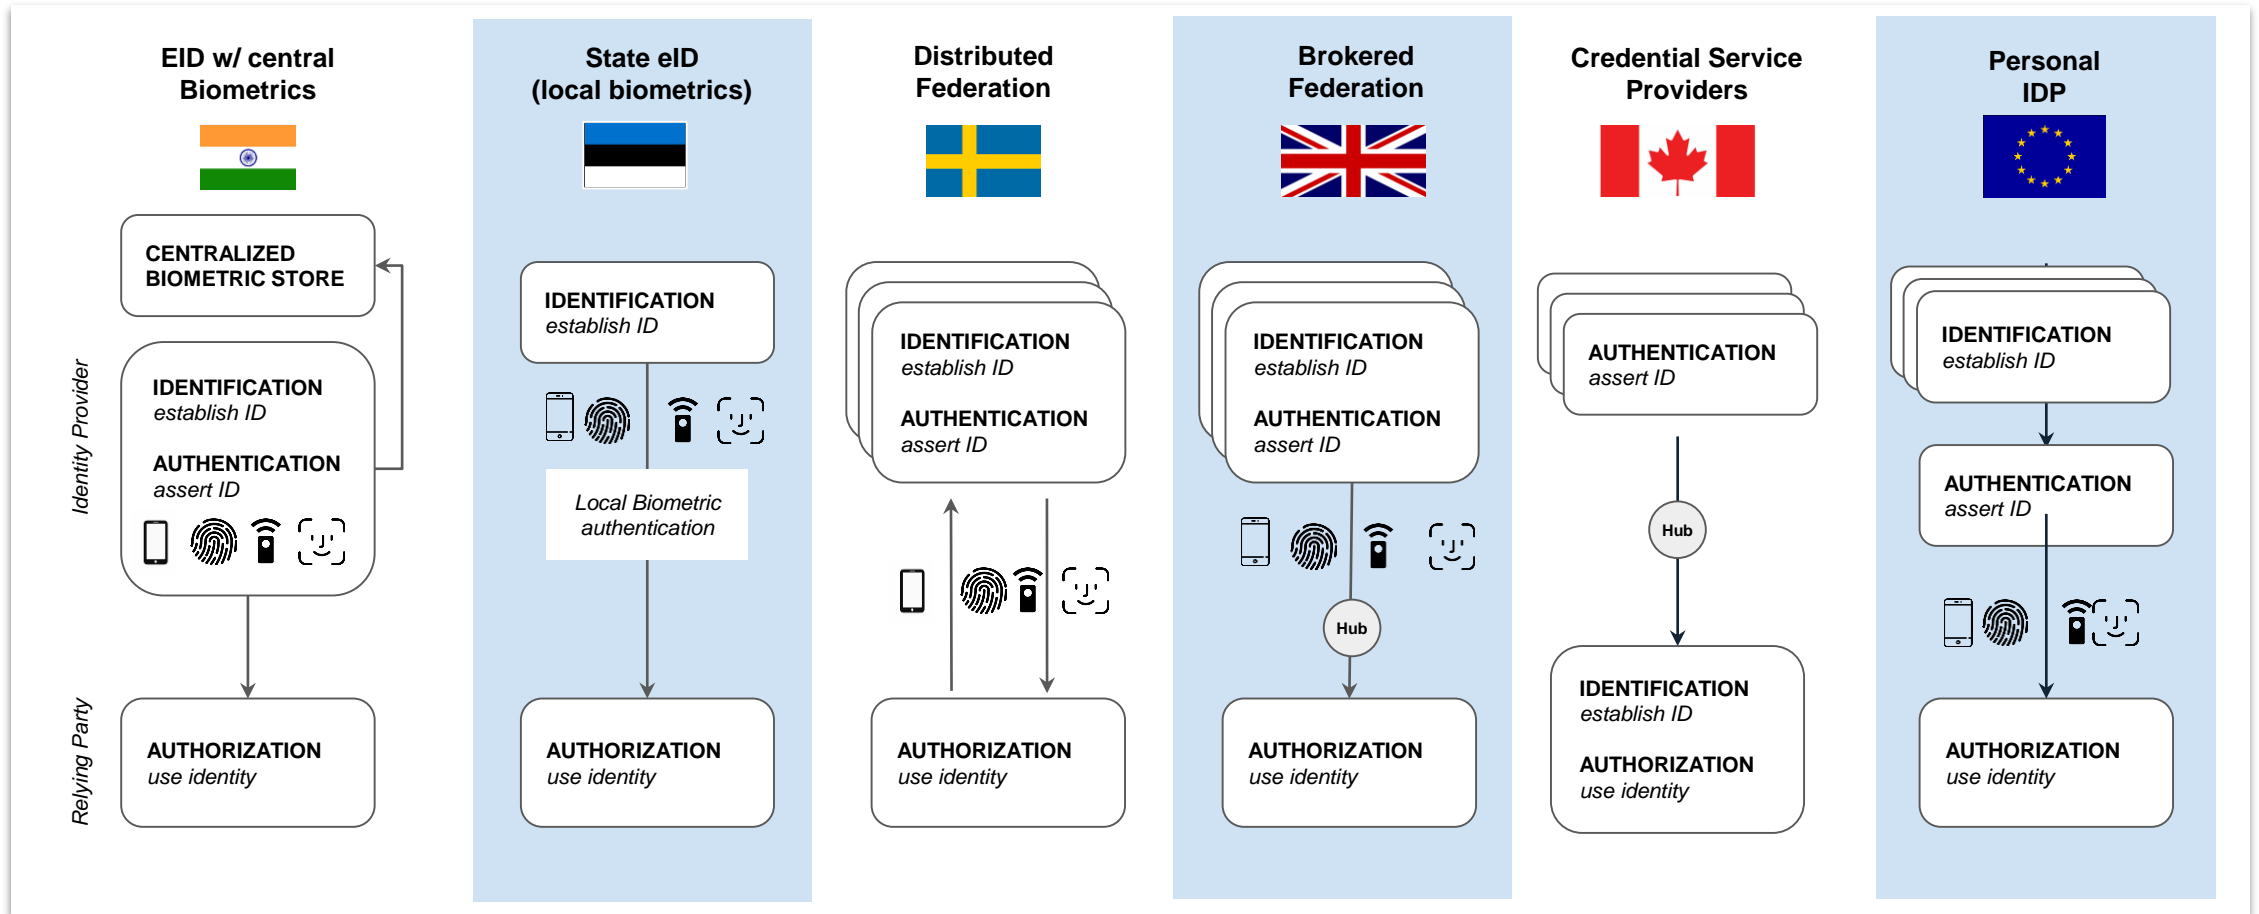

**Uncontrolled
Correlation**

Implementers must grapple with complexity

- Independent oversight
- Transparency
- Accountability
- Public / Private Collaboration
- Accessibility
- Sustainability
- Environmental Sustainability

Digital Identity is critical infrastructure, embedded through the economy.

Common Architectural Models

Common Governance Models

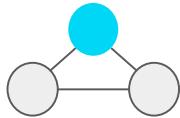

Public Governance

Government-led governance framework & enforcement

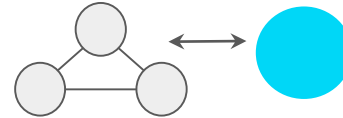

Public-Private Governance

Collaborative public-private development of governance.

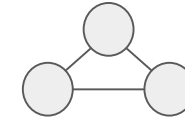

Gov-Enabled Governance

Market driven collaboration with government support

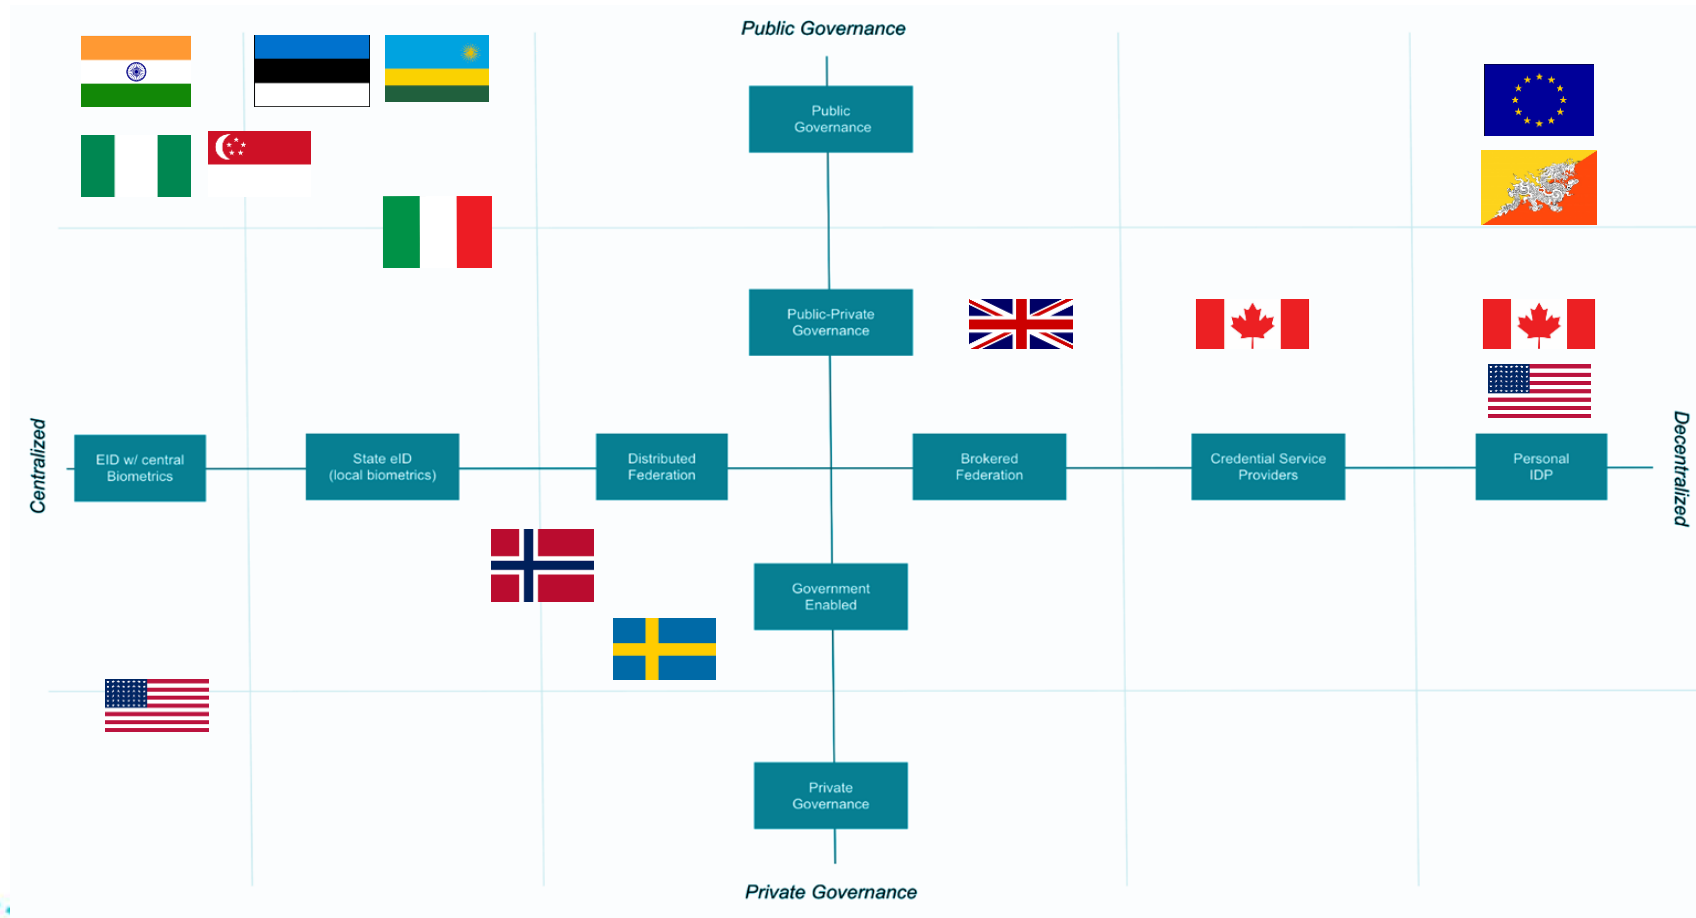

Private Governance

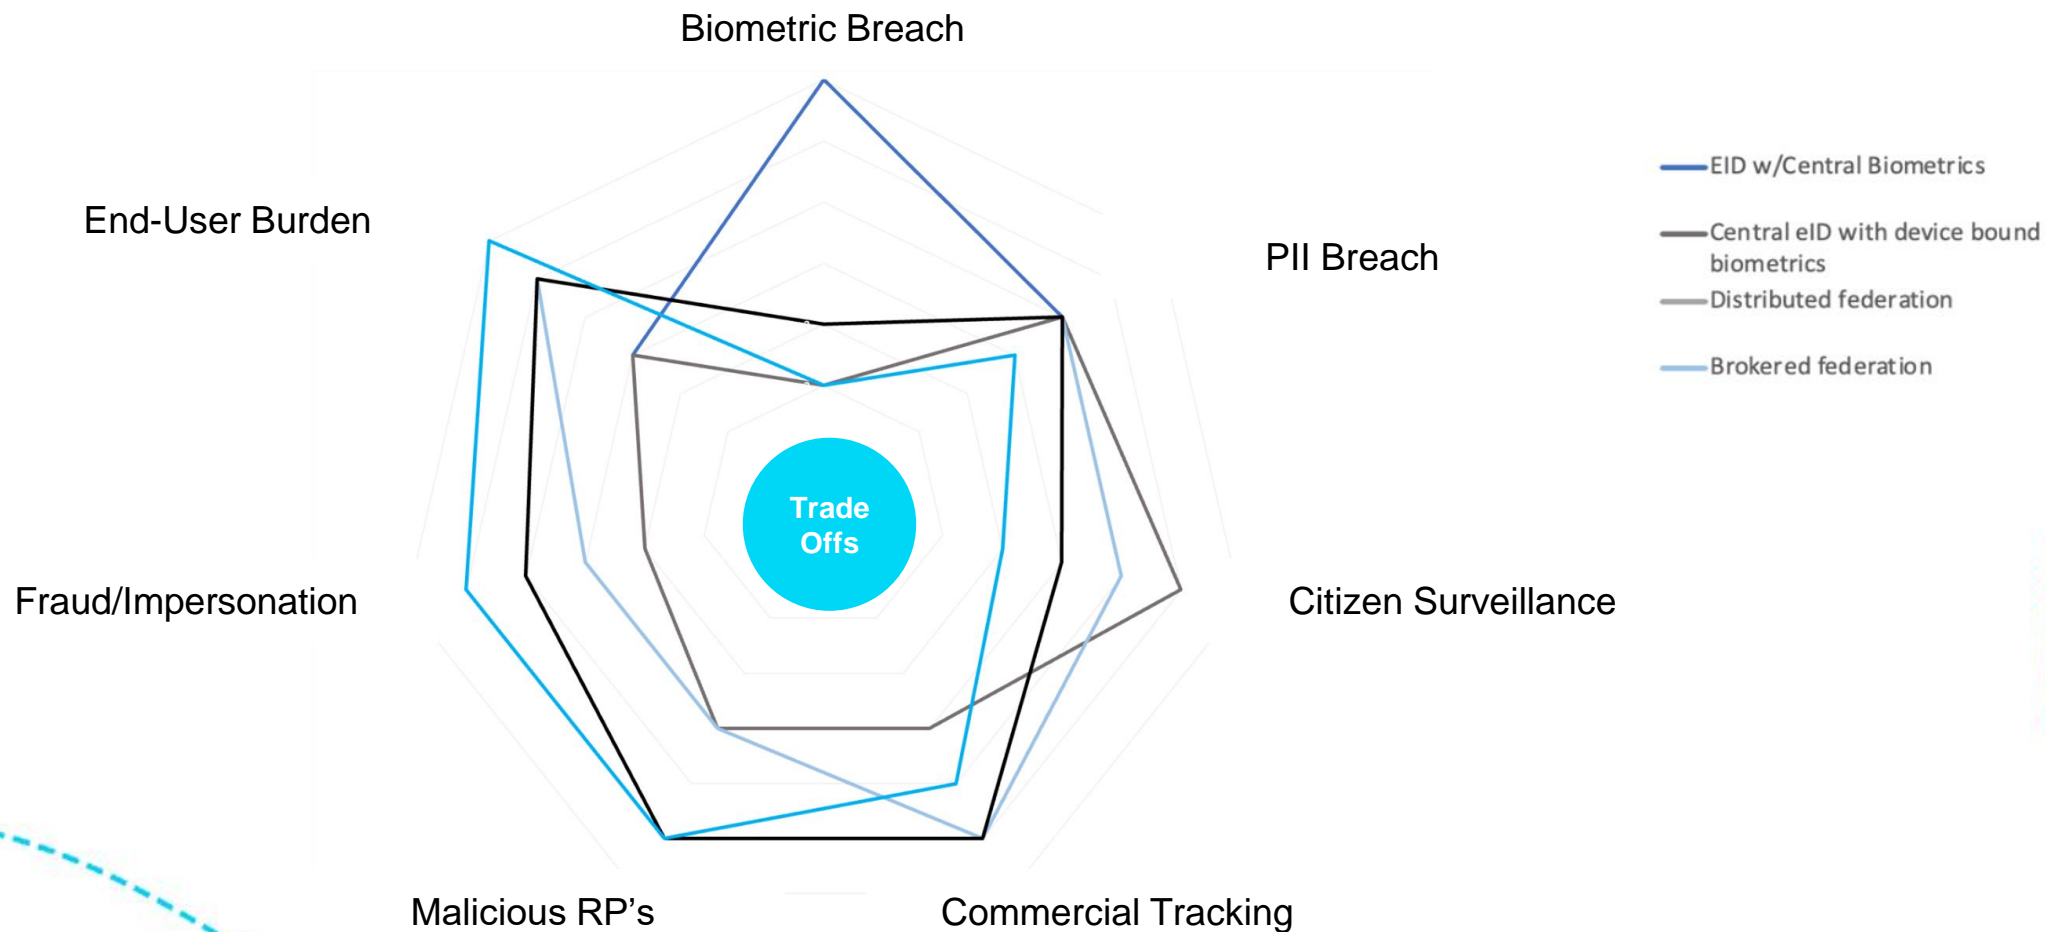

Private parties collaborate with little government involvement

There are several common paradigms

The risks are common across architectures

Digital Identity Systems should be designed to sustain & promote human rights.

1

Human
Centered
Design
Processes

2

Strategic
Design &
Governance

3

Enforce
Security &
Privacy by
Design

Similar mitigations across architectures

Tools

- Biometric protections (e.g. biohashing)
- Modern cryptography and data encryption practices
- Unique identifiers for each third party
- Stateless hubs (if any)
- Scalable Trust Establishment & Maintenance protocols
- Secure recovery processes

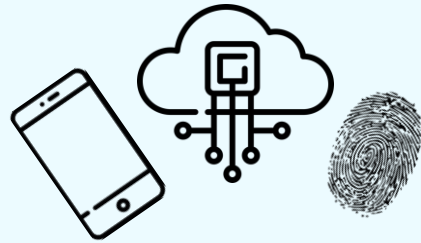

Rules

- Fit-for-purpose Data Security laws
- Fit-for-purpose Privacy laws
- Trust Framework Development
- Enforce Privacy & Security by Design
- Transparent & Independent Governance

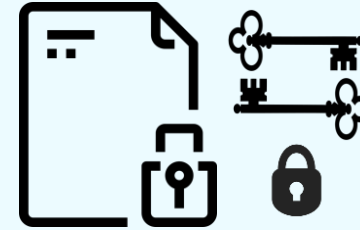

ID Ecosystems are supported by emerging tech

Identity Assurance & User Binding

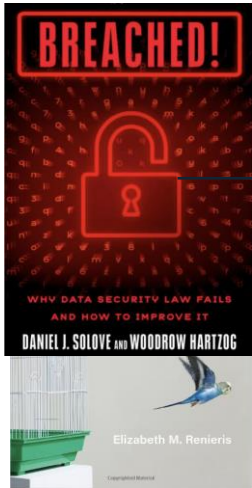

Tools like mobile, improved sensors, and cloud computing enable ever greater user-binding and assurance levels

Security Best Practice

Improved cryptography and security best-practices enable us to use these tools while keeping customer data safer

Building the institutional frameworks

Contracts for
ecosystem actors

- RPs, IDPs, Wallets, etc who feed requirements into security controls & technical design
- AAMVA
- Pan-Canadian Trust Framework
- NIS 2.0 (cyber) & GDPR (privacy)

Digital Identity Systems should be designed to sustain & promote human rights.

1

Human
Centered
Design
Processes

2

Strategic
Design &
Governance

3

Enforce
Security &
Privacy by
Design

4

Proactively
Mature
Interoperable
Standards

**Interoperability
creates
sustainable, usable
systems.**

- Sustainable
- Extensible

- Enables end-user and business transactions
- Cross sector, cross border
- Policy interoperability equally important

Engage in standards

Support standard bodies

Mature & develop standards for the paradigms you wish to create!

Don't leave this to vendors alone

**Mature the
technologies that
will deliver for your
government**

THANK YOU!
